English

General Purpose:

PDFSignCL Client - Commandline Client for a PDFSign Service to sign PDF or PDF/A documents remote on a server via REST Web-service

Requirements:

- MS-Windows 7/8, Server2008, 2012 …

- .NET Runtime 4.0

Commandline Parameters:

Parameter	Description
/src=["]<source file>["]	The source file (or directory) path. Only PDF files are allowed to process. Also a TXT can be used to allow to define multiple files / folders to be processed. The TXT file contains path to the files or folders in each line which has to be processed. If in one line separated by a ";" a second path (file / folder) is defined then this information has will be used as destination for the signed PDF. For the second path also a folder can be used - then the name of the source file will also used for the destination file. For the parameter only a name of the file, also without extension can be used. Then the defaults are the actual folder from where the CL application is started and as default extension *.pdf is used.
/dst=["]<destination file path>["]	The destination file (or directory) path. If this parameter is missing the source file is overwritten. For the parameter only a name of the file, also without extension can be used. Then the defaults are the actual folder from where the CL application is started and as default extension *.pdf is used.
/config=["]<PDFSign profile>["]	Name of an existing PDFsign profile. If it does not exist the selected profile from the UI will be used
/subfolders=true|false	Specifies whether the subfolders should be processed in a folder structure (default: false)
/log=["]<log file path>["]	The path of the log file. If the parameter is missing no log will not be written.
/lang=en|de	The user interface language of the PDfSign profile windows. If missing the default language from the OS will be used
/?	Help

Sample:

- PDFSignCLClient.exe /src="c:\temp\doc_in.pdf" /dst="c:\temp\doc_out.pdf"

- PDFSignCLClient.exe /src="c:\temp_in" /dst="c:\temp_out" /lang=de

- PDFSignCLClient.exe /src="c:\temp\doc_in.pdf" /dst="c:\temp_out" /lang=en

- PDFSignCLClient.exe /src="c:\temp_in" /subfolders=true

- PDFSignCLClient.exe /src="c:\temp\doc_in.pdf" /profile="MySignProfile"

- PDFSignCLClient.exe /src="doc_in" /dst="doc_out" /log=true

- PDFSignCLClient.exe /src="c:\temp\file.txt"
